

EUROPEAN HERITAGE HEADS FORUM

Economic Task Force meeting Prospects of Cultural Statistics in the EU

16-17 SEPTEMBER 2015, BRUXELLES

Political commitments on evidence-based policy making at EU

- **EU Council of Ministers Resolution 1995** on the promotion of statistics concerning culture and economic growth
- **Council Conclusions on cultural governance 2012**
- **Work Plans for Culture: 2008-10, 2011-14, 2015-18: Cultural statistics key transversal priority**
- **Policy Debate (EP)**

WORK PLAN FOR CULTURE 2015-2018

- *Adopted in November 2014 by the Council*
- *4 key priorities:*
 - **A. Accessible and inclusive culture**
 - **B. Cultural Heritage**
 - **C. Cultural and creative sectors: creative economy and innovation**
 - **D. Promotion of cultural diversity, culture in EU external relations and mobility**
 - **Cultural statistics as a cross-sectoral priority**

In line with these political commitments

- First **European working group** on cultural statistics (1997)
- **Pocket book** on cultural statistics (2007, 2011)
- **ESSnet culture** project working group (2009): report (published 2012)

2015

- Relaunch WG on **cultural statistics** in 2015
- Feasibility study on data collection and analysis in the CCS' in the EU in 2015
- Cultural Heritage Counts for Europe
- JRC indicator on creative cities

... in a nutshell

To achieve a **regular production of coherent and comparable figures**:

- Opening of a **dedicated section** in the Eurostat website
- Creation of **new datasets** (to be populated with data extracted from Eurostat database)
- **Multidimensional datasets** (to be updated on regular basis), easy downloading, metadata for each statistical area
- **Statistics Explained** articles on each area
- **Publications**: press releases, pocketbooks, leaflets, etc.

Work plan (first half of 2015)

•Dissemination of available data (Employment and International trade in cultural goods)

- Creating a new domain on Eurostat 'data tree'
- Designing the content of thematic tables for Eurobase: titles, dictionary, codes and dimensions to be defined
- Developing a workflow for producing/updating data on a permanent basis

•Re-launch of the Culture Statistics Working Group

•Start preparation of Statistics Explained articles

- Standard dissemination tool of Eurostat
- Visibility on Internet (Google ...)

Work plan (second half of 2015)

- Identification of challenges and possible solutions for the production of continued cultural statistics in the fields of:

- ▣ **Enterprises** in cultural sector
- ▣ **Participation**
- ▣ **Expenditure**
- ▣ International trade in cultural **services**

- **Second Culture Statistics Working Group (canceled)**

- **New edition of the Pocketbook**

Work plan (from 2016 onwards)

- Creation of **indicators** to measure the impact of culture on the economy at a pan EU level (for the moment no **calculation of the GDP/VA**)
- Development of **satellite accounts**
- **Regular** production of updated statistics
- **Use of additional data sources**

Statistics explained

WELCOME TO STATISTICS EXPLAINED

Statistics Explained, **your guide to European statistics**. Statistics Explained is an official Eurostat website presenting statistical topics in an easily understandable way. Together, the articles make up an **encyclopedia** of European statistics for everyone, completed by a [statistical glossary](#) clarifying all terms used and by numerous links to further information and the latest data and metadata, a **portal** for occasional and regular users.

To find the information you need, please select a theme from the menu below or use the coloured boxes on the right. The search function (alt-f) can also be used.

LOOKING FOR AN ARTICLE ON A SPECIFIC THEME

 General and regional statistics/EU policies	 Economy and finance	 Population and social conditions
 Industry and services	 Agriculture, forestry and fisheries	 International trade
 Transport	 Environment and energy	 Innovation and information society

NEW / UPDATED ARTICLES

 [Marriage and birth statistics](#)

Did you know that...

In 2013, the highest air emissions of the pollutant ammonia (NH₃) per person were reported for Ireland, (23.5 kg per capita), Lithuania (13.6 kg) and Denmark (13.3 kg), while the lowest emissions were recorded in the United Kingdom and Bulgaria (both 4.2 kg per capita) and Malta (3.8 kg). ESTAT Sources

Economic activity - EU Structural Business Statistics (SBS)

Employment, from the EU Labour Force Survey (EU-LFS)

International trade in cultural goods - Comext database

Cultural participation - Social Income and Living Conditions survey (SILC), ICT Use Survey

Consumption - Household Budget Surveys (HBS), Government expenditure

Economic data

- *SBS provide data for most CCS based on NACE codes, (Books and Press, Audiovisual and Multimedia (including music and video games), Architecture, and Advertising.*
- *Data for Visual Arts (include Design) are theoretically available but as businesses in this sector tend to be small, it is likely that they do not appear in business survey samples, and economic indicators may not be released because of privacy issues.*
- *Economic activity data are not available for Cultural Heritage, Archives and Libraries and Performing Arts as NACE divisions 90 and 91 are not covered by the SBS. (as from 2018, these sectors will also be included)*

Employment

- Many ISCO and NACE codes are not structured to allow cultural activities to be distinguished.
- Minimal level of detail is currently 2 and 3 digits

ESS-net Culture proposed to adopt a cross classification of:
ISCO - International Standard Classification of Occupations, which classifies occupations, looking at the tasks and duties undertaken in the job
NACE - Classification of Economic Activities in the European Community, which classifies the employer's main activity

Cultural employment

A = Persons employed in a cultural occupation in the culture sector (a musician of an orchestra)

B = Persons employed in a cultural occupation in the non-culture sector (a designer in the automobile industry)

C = Persons employed in a non-cultural occupation in the culture sector (a secretary in the administrative office of a theatre)

And naturally excludes:

D = Persons employed in a non-cultural occupation in the non-culture sector (the secretary of the AD of the automobile industry)

Figure 1: Cultural jobs at the intersection of NACE and ISCO classifications

		Activities (NACE)	
		Cultural	Non-cultural
Occupations (ISCO)	Cultural	I	II
	Non-cultural	III	IV

Estimate the cultural coefficient

- **ESSnet Culture TF3 proposed a methodology to estimate the cultural coefficient through cultural coefficients (0, 1, 0,5)**
- **The WG agreed on estimating the cultural coefficient on the basis of countries which provide data at a higher level of details (i.e. 3 digits for NACE; 4 digits for ISCO)**

- **When the cultural coefficient is impossible to estimate, the whole code is excluded, resulting in a minimalist estimation of cultural employment.**
- **(e.g. 1222 Advertising and public relations managers) and sectors (e.g. NACE 581 Publishing of books, periodicals and other publishing activities).**
- **MS agreed to collect new data in order to overcome this gap**

NACE 910 (Libraries, archives, museums and other cultural activities) is among the codes at risk of exclusion

Includes a 4 digits sub-category (9104 Botanical and zoological gardens and nature reserves activities) which is not cultural according to the ESS-net framework.

The 3 other sub-categories are fully cultural and at the very heart of the Culture domain: (9101 Library and archives activities, 9102 Museums activities, 9103 Operation of historical sites and buildings and similar visitor attractions).

Same happens for important codes, such as 5811 Book publishing.

A part of the error is recuperated trough the cross-tabulation method.

Feasibility study on data collection and analysis in the CCS's in the EU

Contribute to the **development of cultural policies** at EU and national levels;

Qualitative and quantitative performance of the Creative Europe Programme;

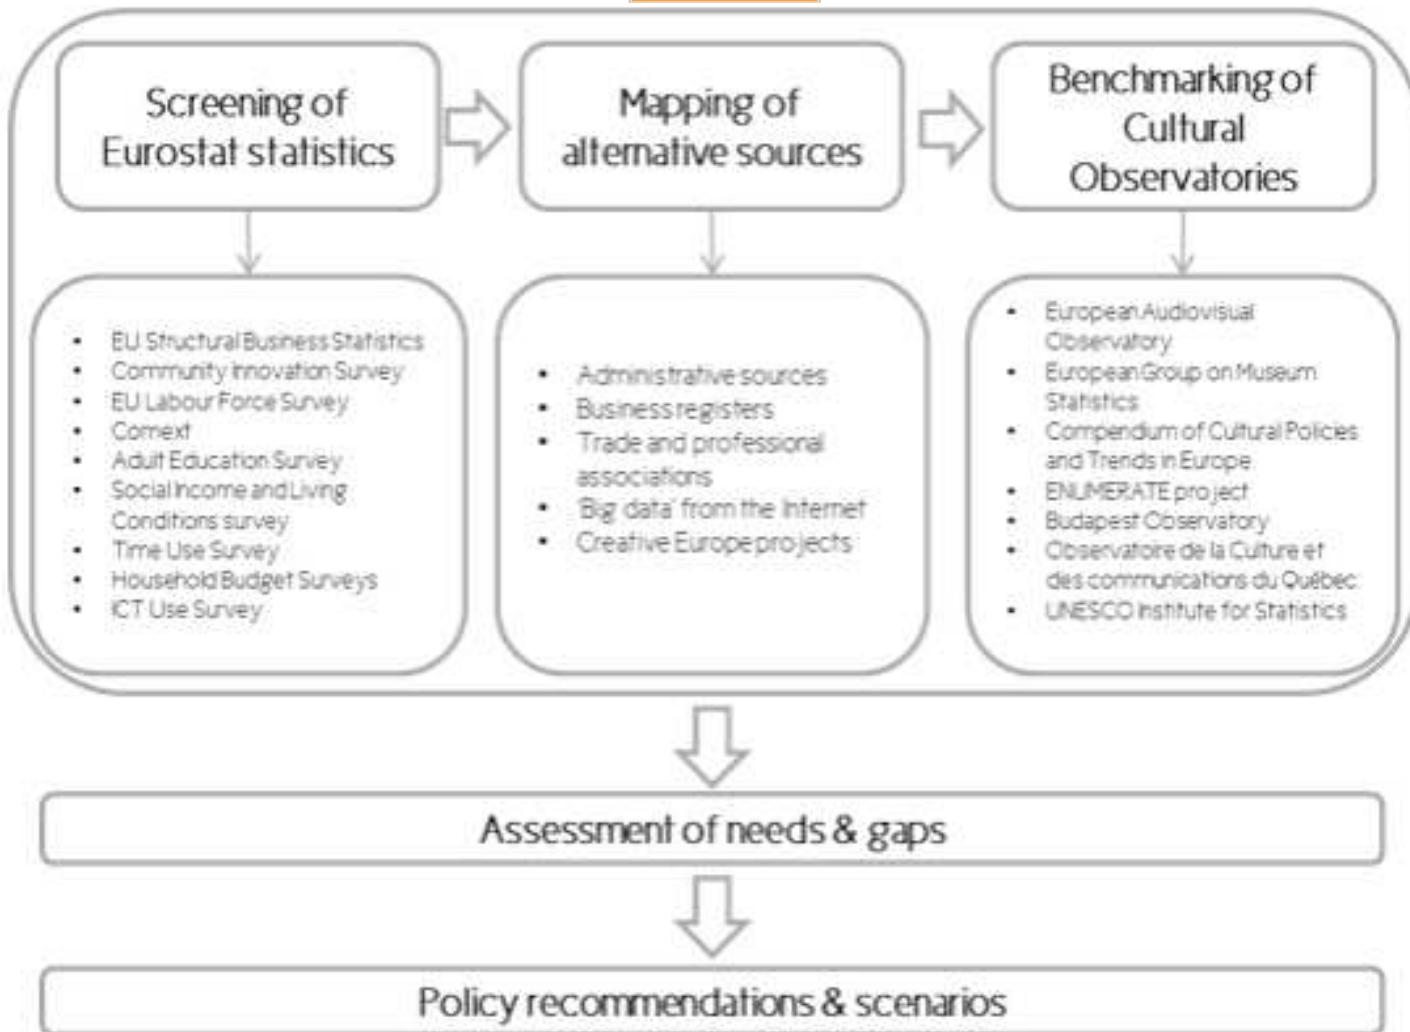

Quality standards and **accessibility** to the data produced by projects funded under the Creative Europe Programme.

Creative Europe

Supports transnational policy cooperation in the collection of market data, studies, analysis of labour market and skills needs, European and national cultural policies analysis and support for statistical surveys based on instruments and criteria specific to each sector and evaluations;

Art. 18 - monitoring and evaluation of the Programme's performance: "specific, measurable, achievable, relevant and time-bound targets and indicators, including qualitative ones";

Art. 15.2 - "feasibility study exploring the possibility of collecting and analysing data in the cultural and creative sectors other than the audio-visual sector"

Main European statistics challenges

- CCS' estimates rarely comparable as EU level
- Member States use different definitions of CCS
- Difficulties in capturing the activities of a very large number of small and micro-companies
- Difficult to measure the value of the output of non-industrial sectors such as museums, galleries and libraries, performing arts etc
- Copyright and neighboring rights royalty collection and intangible assets in general (including brand value) not clearly identifiable from official statistics.
- Detailed data on new distribution and sales patterns or innovative forms of cultural engagement fall outside the scope of Eurostat's surveys;
- No measurement of cultural diversity (production, distribution or consumption).
- 'big data' not yet exploited

Alternative data explored

- **Administrative sources (Ministry records)**
- **Business registers**
- **Rights management bodies and unions**
- **Professional associations**
- **“Big data” providers**
- **Cultural Observatories (incl. EGMUS)**

EGMUS

Established in 2002;

27 European countries, from within and outside the European Union;

Main objective is collection and publication of comparable statistical data;

Available data from national museum statistics and surveys are compiled and updated and stored in the Abridged List of Key Museum Indicators (ALOKMI) table. The ALOKMI is the first step towards the harmonisation of museum statistics in Europe

A number of EGMUS Members was active in the development of the European Statistical System Network

http://www.egmus.eu/nc/en/statistics/complete_data/

EGMUS Questionnaire

concerns the key indicators of the museums:

*identification of museums (to distinguish these from the 'museum-like' institutions such as exhibition halls or 'Kunsthallen'),
kind of museums,
opening hours,
legal status and ownership,
exhibition and visits,
expenditure and income,
personnel,
use of information and communication technology.*

Various countries already use the Standard Questionnaire in their national surveys.

Limits of alternative data sources

- **Geographical coverage**
- **Quality standards**
- **Lack of comparability**
- **Access costs**

Integrated approach is not a choice... is a need

Environmental ecosystem

Cultural ecosystem
